ABSTRACT

The housing market plays a vital role in economic development. This project focuses on analyzing housing market trends using data visualization techniques in Tableau. By studying the relationship between features such as flat area and number of bedrooms with sale price, meaningful insights were derived. The analysis helps in understanding pricing patterns and market behavior effectively.

INTRODUCTION

Real estate data contains valuable insights about pricing trends and property features. Data visualization enables better understanding of these trends.

This project aims to analyze housing sale prices and identify how various features influence property cost using Tableau.

OBJECTIVES

- To analyze the relationship between flat area and sale price
- To analyze average sale price by number of bedrooms
- To create interactive dashboards using Tableau
- To identify key housing market trends

DATASET DESCRIPTION

The dataset used for this project was obtained from Kaggle.

- Total Columns: 31
- Dependent Variable: Sale_Price
- Independent Variables: Flat_Area, No_of_Bedrooms, Location, Date, etc.

The dataset contains detailed information about house features and pricing.

TOOLS & TECHNOLOGIES USED

- Tableau Public
- Kaggle Dataset
- GitHub
- SmartInternz Platform

DATA VISUALIZATION & ANALYSIS

Sale Price vs Flat Area

Figure 1: Relationship between Flat Area and Sale Price

The scatter plot shows a positive correlation between flat area and sale price. Houses with larger area tend to have higher sale prices.

Average Sale Price by Number of Bedrooms

Figure 2: Average Sale Price by Bedrooms

The bar chart indicates that houses with more bedrooms generally have higher average sale prices.

Story Dashboard

Figure 3: Tableau Story Representation

The story dashboard presents insights in an interactive format summarizing all findings.

CONCLUSION

The project successfully demonstrates the application of Tableau in analyzing housing market trends. The insights obtained help understand pricing patterns and support data-driven decision-making in real estate.

FUTURE SCOPE

- Location-wise price comparison
- Time-series analysis of housing trends
- Predictive modeling for price estimation
